DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group II (claims 4-10) in the reply filed on June 3, 2004 is acknowledged and claims 1-3 and 11-13 have been withdrawn. A further Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 4-6, drawn to method of manufacturing, classified in class 438, subclass 216.
- II. Claims 7-10, drawn to method of evaluating, classified in class 438, subclass 14+.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination does not rely on the details such as the said existence ratio of subject nitrogen atoms to a total number of nitrogen atoms in the said silicon oxynitride film being 20% or less as recited in claim 4. The subcombination has a separate utility such as evaluating/testing characteristics of a transistor device.

Art Unit: 2826

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
